

ABSTRACT

An inventive vehicle air bag door includes a back-up member **13** provided on the bottom side of a panel main body **1**. The back-up member **13** includes a back-up section **27**, a plate section **20** and a hinge section **24** which are integrally formed. The hinge section
5 includes: a first curved portion **34a** whose midsection is curved so as to protrude toward a door section **17**; and a second curved portion **34b** whose midsection is curved so as to protrude away from the door section **17**. When the door section **17** is opened, the first and second curved portions **34a** and **34b** are each extended and then the plate section **20** is pivoted around its junction with the second curved portion **34b**.
